LETTER OF CERTIFICATION

The natural materials used to create Shouldice Stone are blended in a state-of-the-art facility to create versatile products capable of use above-grade, at-grade, or below-grade as necessary.

The manufactured products are able to be used in these applications by adhering to the highest standards of quality; something that is not always available from other manufacturers.

Architectural Units are manufactured of limestone aggregate, Portland cement, water repellent and colour oxide.

Masonry Units are manufactured and tested to exceed code standards of the current ASTM Specifications for Concrete Masonry Units.

Control joints and joint reinforcing should be installed in accordance with NCMA-TEK 10-4 guidelines. Flashings should be installed in accordance with NCMA-TEK 19-5 guidelines.

Masonry cleaning products shall be applied in strict accordance with manufacturer's instruction. A test area must be conducted for possible adverse reaction with the diluted cleaning product and be available for inspection and approval by the architect.

We hereby state the approved materials we proposed to furnish for this project will meet the specifications as described above.
